us-east-1.console.aws.amazon.com/ec2/home?region=us-east-1#CreateSnapshot:
EC2 > Snapshots > Create snapshot
Create snapshot Info
Create a point-in-time snapshot of an EBS volume and use it as a baseline for new volumes or for data backup. You can create snapshots from an individual volume, or you can create multi-volume snapshots from all of the volumes attached to an instance.
Snapshot settings
Resource type Info
Volume
Create a snapshot from a specific volume.
Instance
Create multi-volume snapshots from an instance.
Instance ID
The instance from which to create multi-volume snapshots.
Select an instance
Description
Add a description for your snapshot.
It will take backup of all the volume in EC2
EC2 Machine
EBS storage

Description
Add a description for your snapshot.
255 characters maximum
Volumes - optional Info
By default, all volumes attached to the instance are included in the multi-volume snapshot set. You can optionally exclude the root volume or specific data volumes. You can also indicate whether to copy the tags from the source volumes to the snapshots.
Exclude volumes
Instance which we want to take the backup

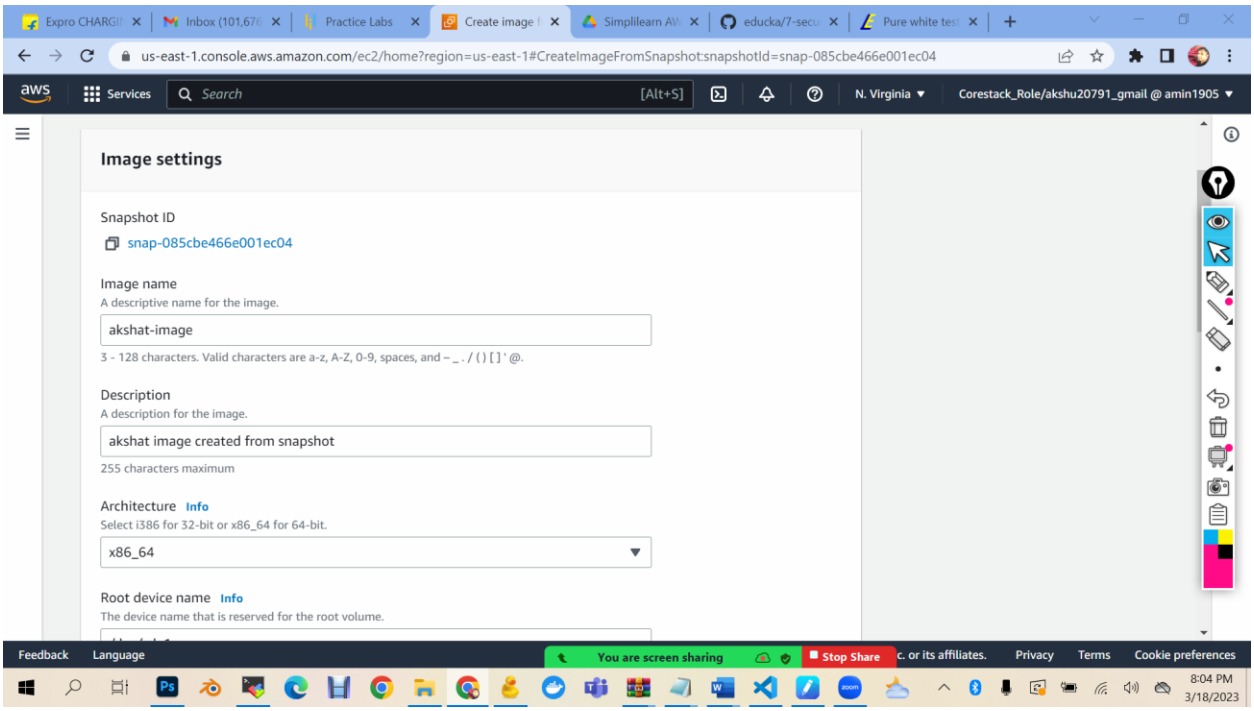

us-east-1.console.aws.amazon.com/ec2/home?region=us-east-1#CreateSnapshot:
Exclude volumes
Indicate whether to exclude the root volume or specific data volumes from the snapshot set.
Exclude root volume (vol-0b8966ecafd372d00, Not encrypted)
Exclude specific data volumes
Copy tags from source volume
Indicate whether to copy the tags from the source volume to the snapshot.
Copy tags
Tags Info
A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.
No tags associated with the resource.
Add tag
You can add 50 more tags.

Step 3: Launch the template which would be utilized to launch a new machine via autoscaling

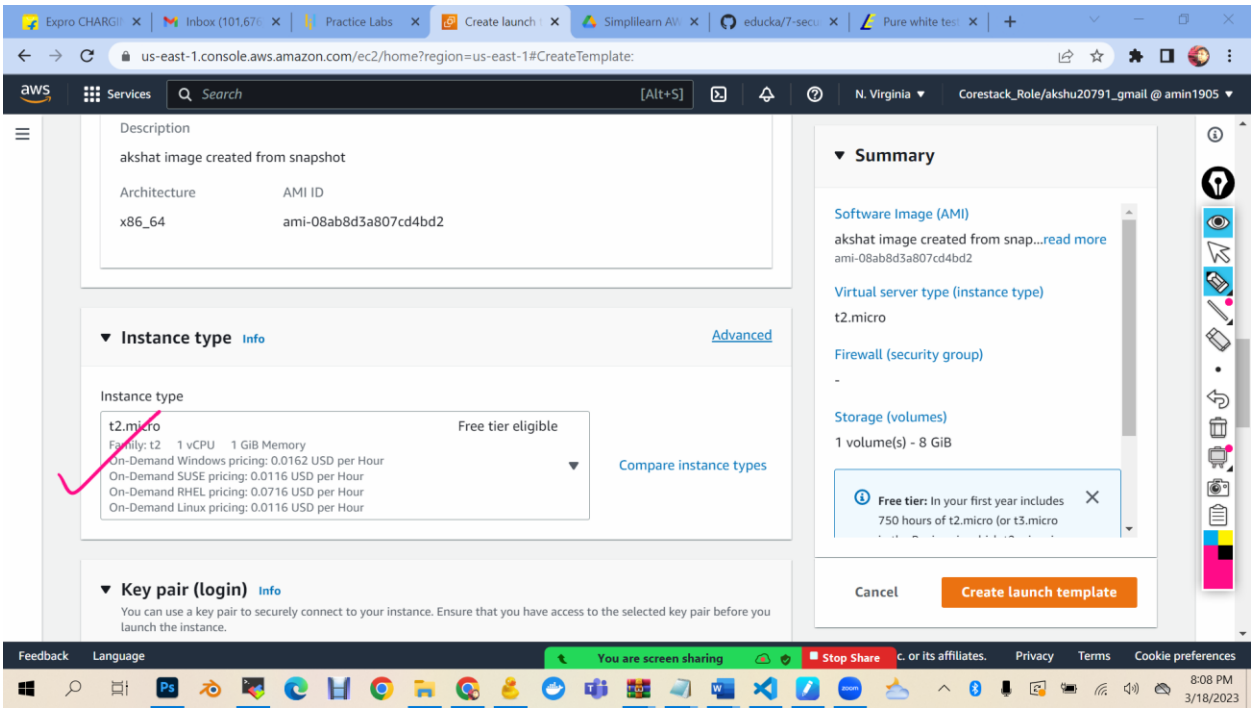

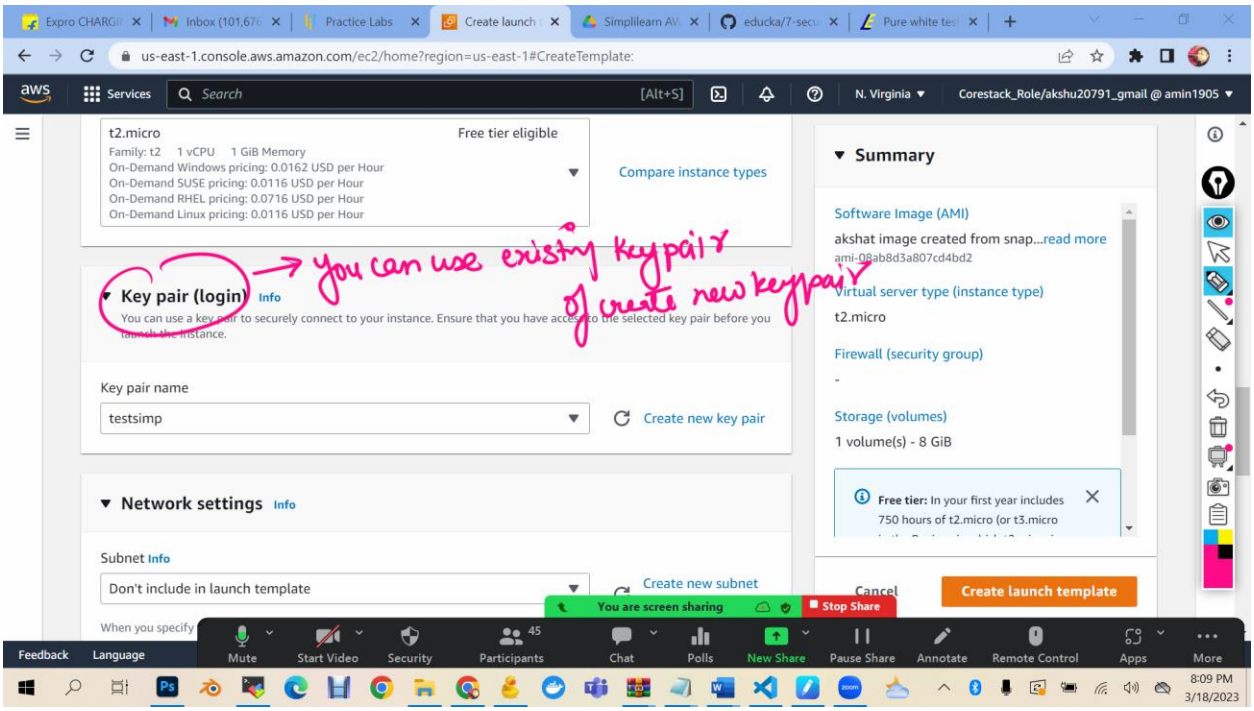

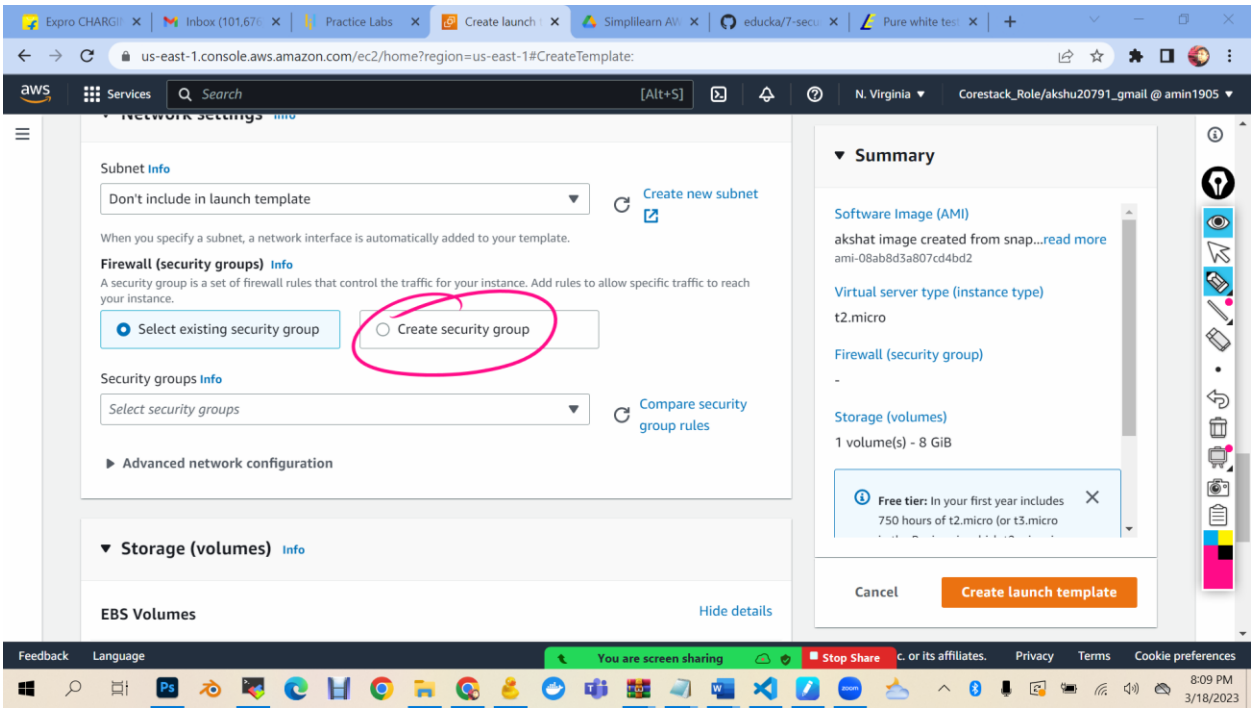

Create launch template
Creating a launch template allows you to create a saved instance configuration that can be reused, shared and launched at a later time. Templates can have multiple versions.
Launch template name and description
Launch template name - required
akshat-launch-template
Must be unique to this account. Max 128 chars. No spaces or special characters like '&', '*', '@'.
Template version description
A prod webserver for MyApp
Max 255 chars
Auto Scaling guidance Info
Select this if you intend to use this template with EC2 Auto Scaling
Provide guidance to help me set up a template that I can use with EC2 Auto Scaling
Template tags

Step 4 - optional
Configure group size and scaling policies
Step 5 - optional
Add notifications
Step 6 - optional
Add tags
Step 7
Review
Use the options below to attach your Auto Scaling group to an existing load balancer, or to a new load balancer that you define.
No load balancer
Traffic to your Auto Scaling group will not be fronted by a load balancer.
Attach to an existing load balancer
Choose from your existing load balancers.
Attach to a new load balancer
Quickly create a basic load balancer to attach to your Auto Scaling group.
Health checks - optional
Health check type Info
EC2 Auto Scaling automatically replaces instances that fail health checks. If you enabled load balancing, you can enable ELB health checks in addition to the EC2 health checks that are always enabled.
EC2
ELB
Health check grace period
The amount of time until EC2 Auto Scaling performs the first health check on new instances after they are put into service.
300
seconds
Autoscaling Checks the health of machine on Regular Basis via ping operation. So if any Machine goes down it is Responsibility of Autoscaly to launch a new machine

Autoscaling have created 3 desired capacity machines

If you terminate all the machines…in sometime u will see again 3 new machines is launched by autoscaling
