Launch website on ubuntu os

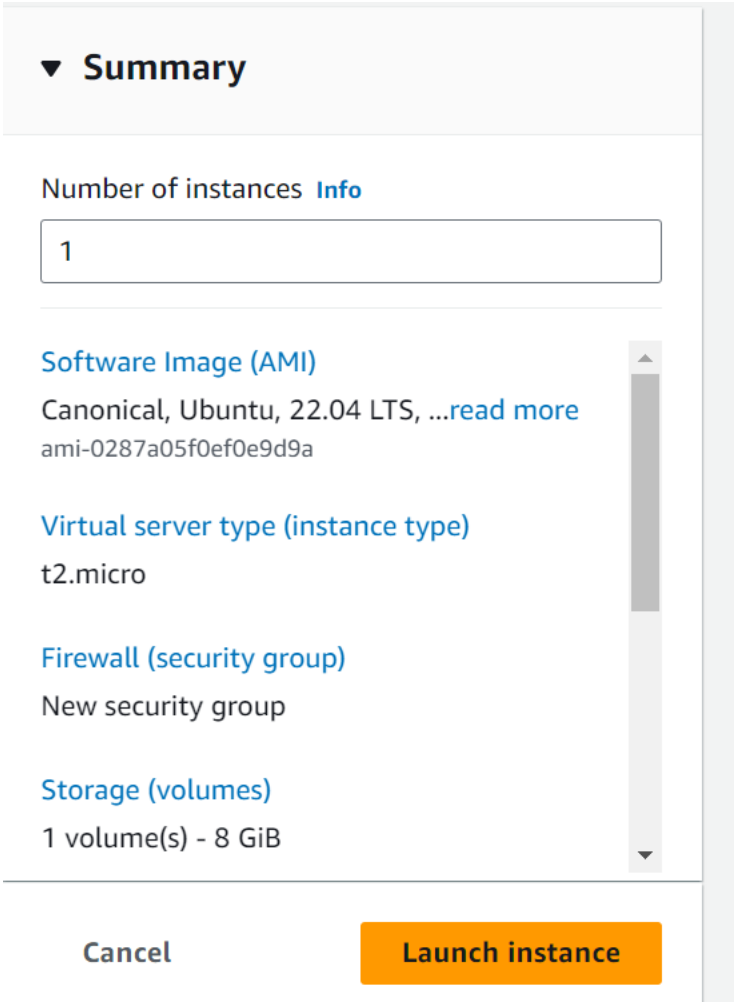

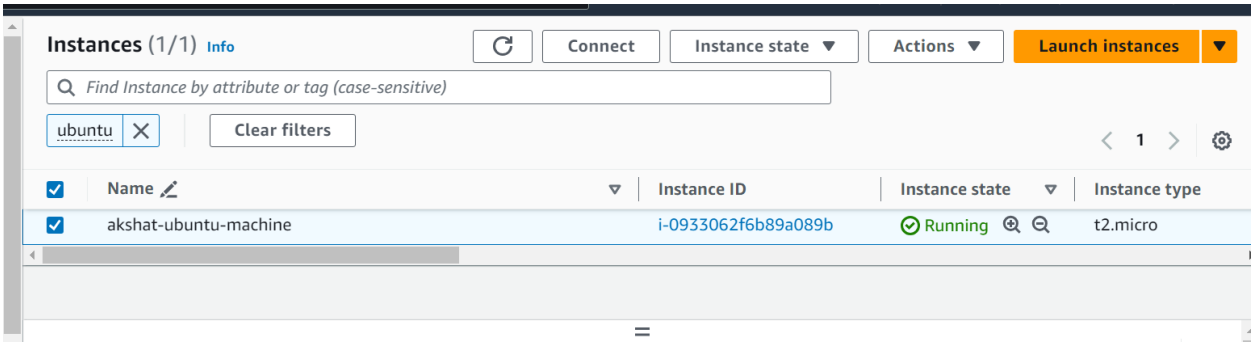

Instance type: t2.micro

Create new key pair or If you have existing key pair you can use that

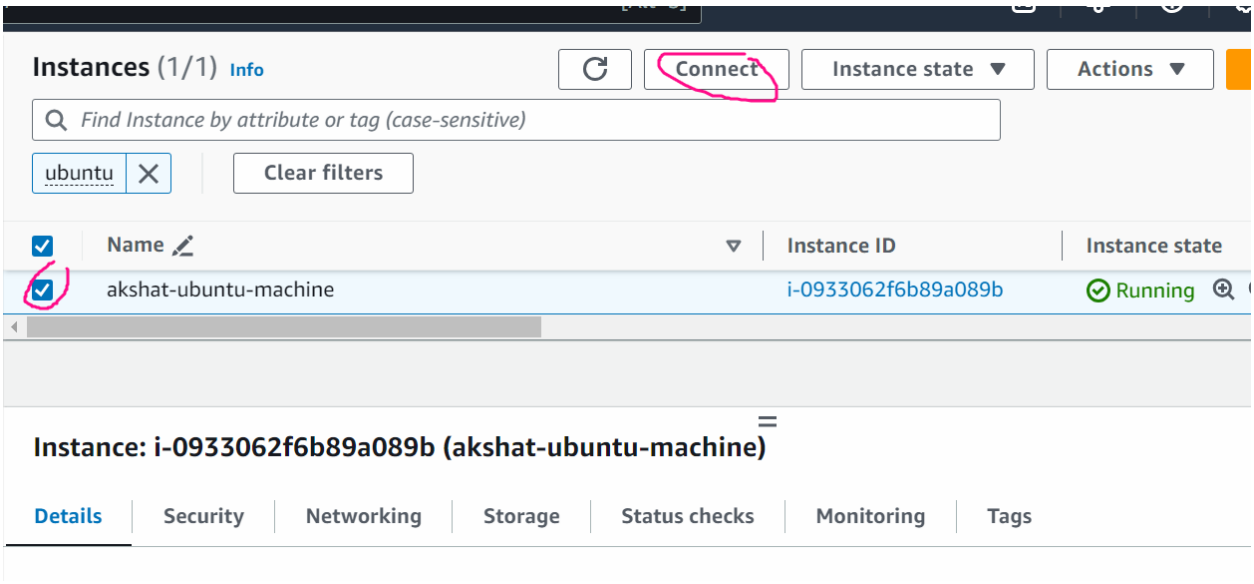

Launch instance

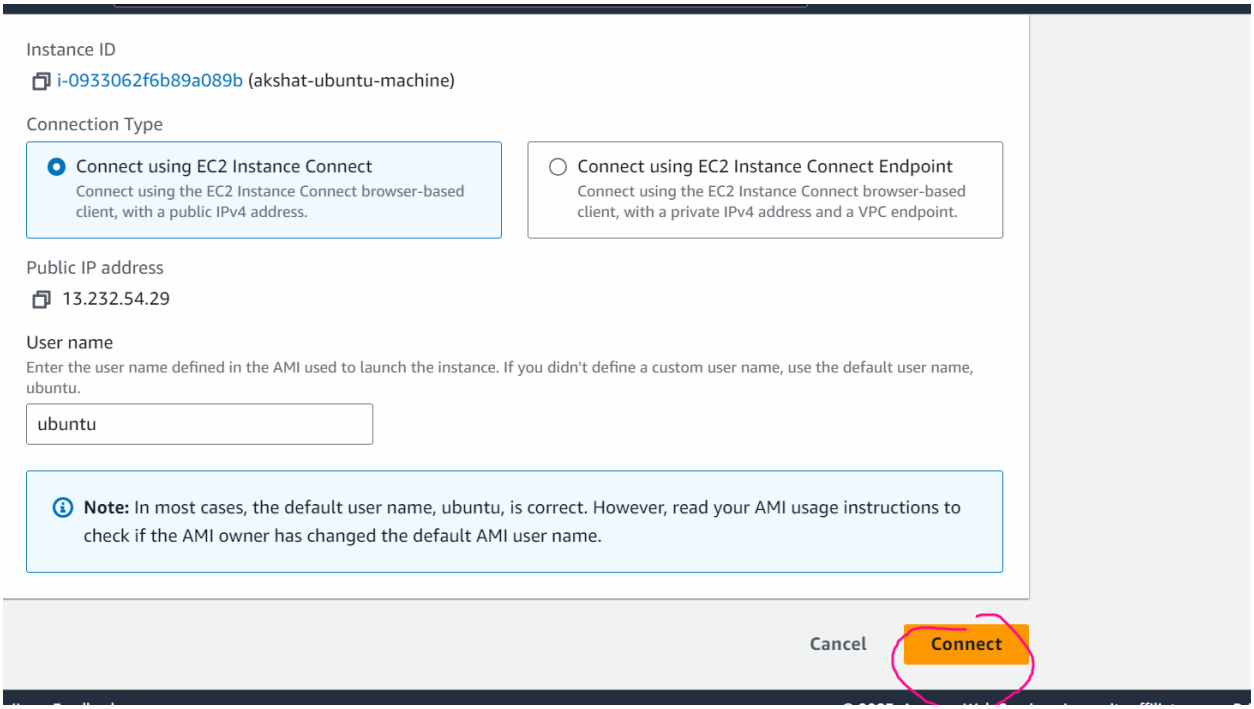

There are multiple ways to connect to the machine….

Lets start with the first method which is browser based connection :

METHOD 1:

In ec2 instance connect tab

```
The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

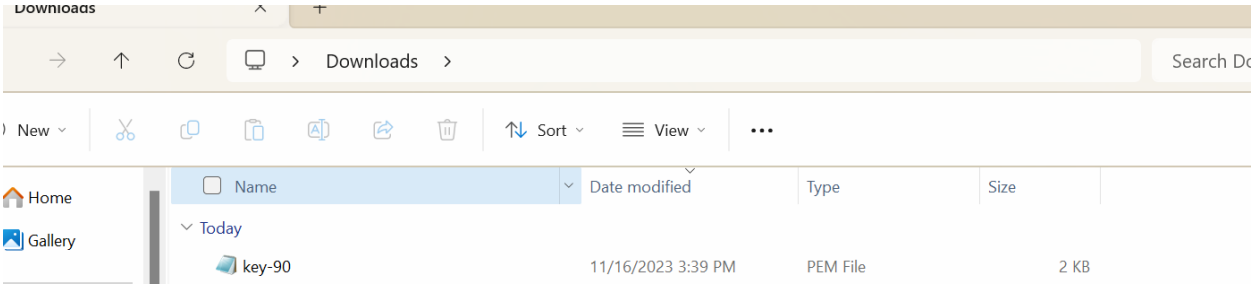

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.
```

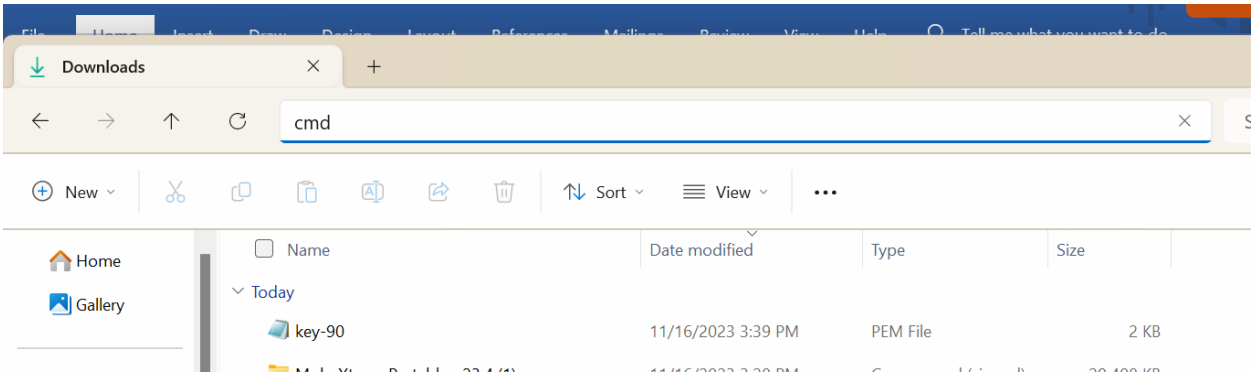

METHOD 2:

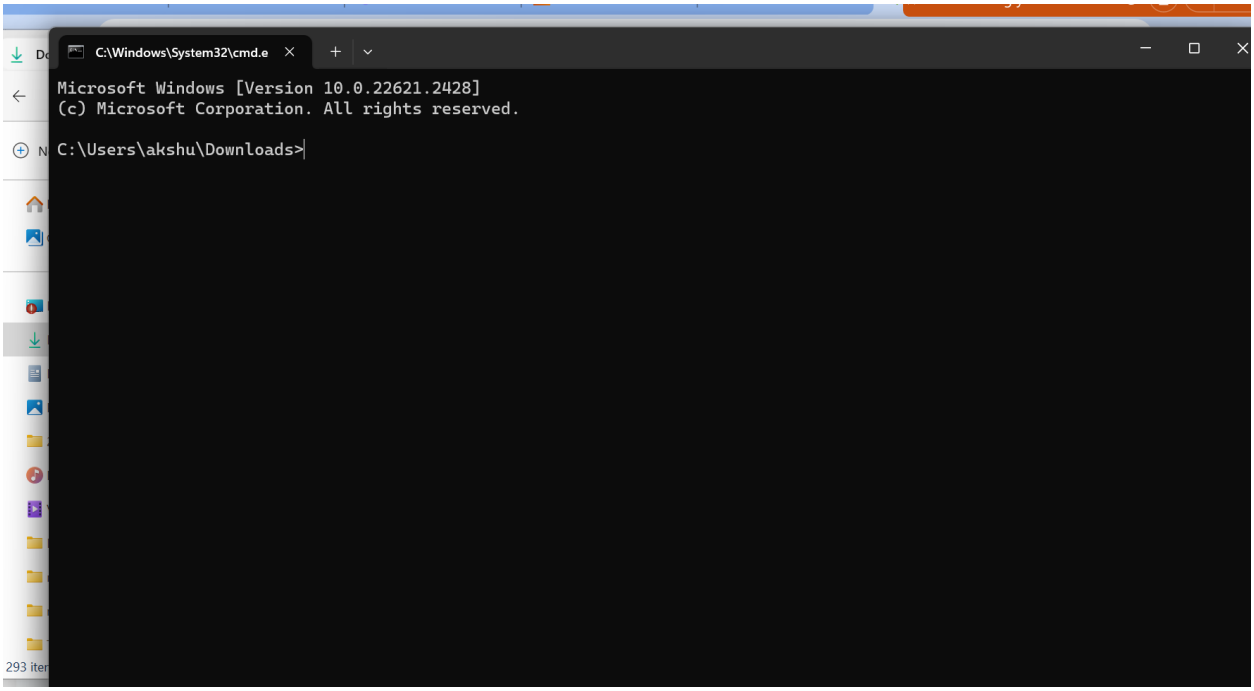

VIA CMD

In your laptop -> go to the location where your pem file is downloaded locally

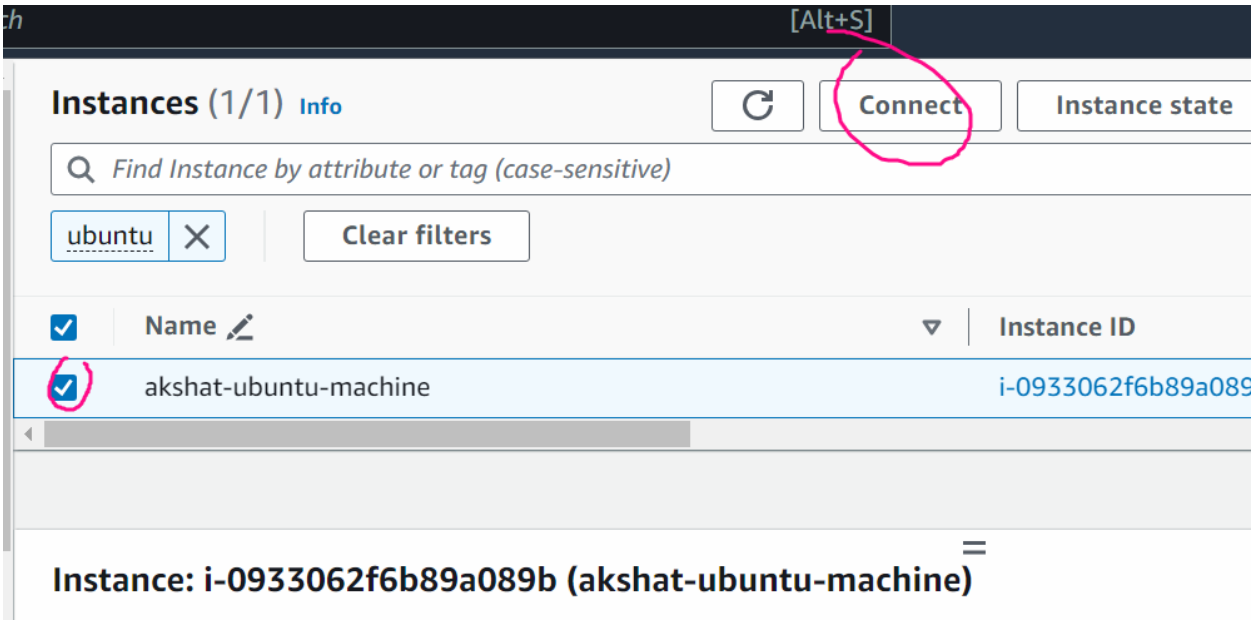

Write cmd

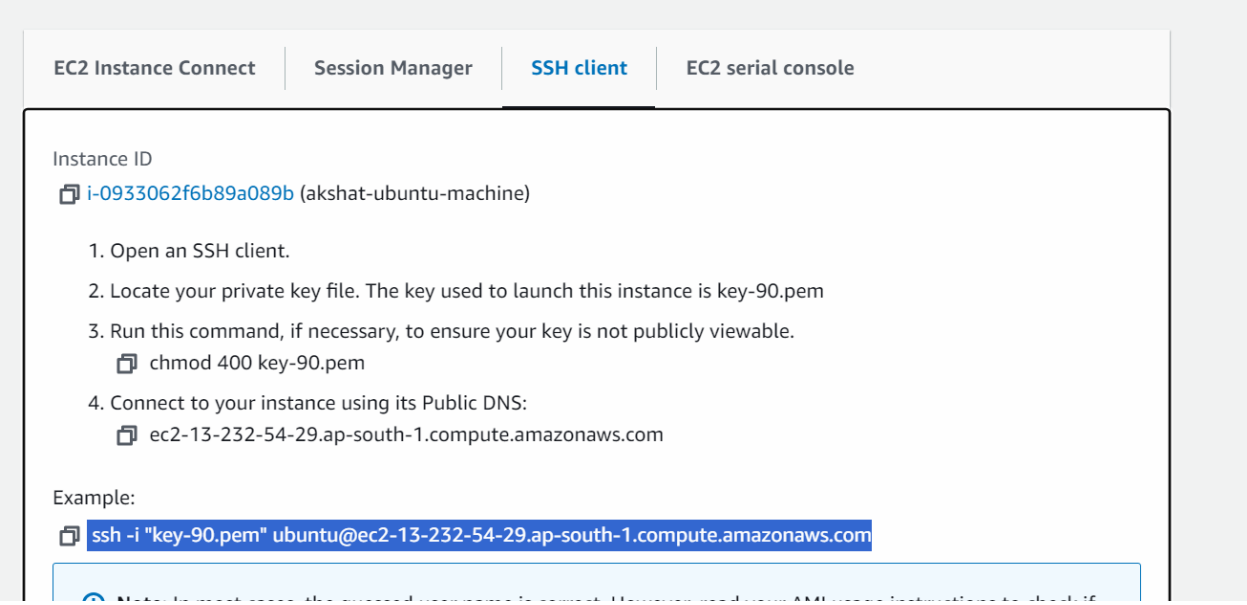

Now I will establish the ssh connection with the machine

Click on ssh client

Copy and paste it in cmd

```
C:\Users\akshu\Downloads>ssh -i "key-90.pem" ubuntu@ec2-13-232-54-29.ap-south-1.compute.amazonaws.com
The authenticity of host 'ec2-13-232-54-29.ap-south-1.compute.amazonaws.com (13.232.54.29)' can't be established.
ED25519 key fingerprint is SHA256:0PK5P9uQiUq1c60qwekXXUXGu958M3eb6iMHV9spkSg.
This key is not known by any other names
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added 'ec2-13-232-54-29.ap-south-1.compute.amazonaws.com' (ED25519) to the list of known hosts.
Welcome to Ubuntu 22.04.3 LTS (GNU/Linux 6.2.0-1012-aws x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:     https://landscape.canonical.com
 * Support:        https://ubuntu.com/advantage

  System information as of Thu Nov 16 10:20:31 UTC 2023

  System load:  0.0029296875      Processes:             97
  Usage of /:   20.7% of 7.57GB   Users logged in:       0
  Memory usage: 22%               IPv4 address for eth0: 172.31.37.238
  Swap usage:   0%

Expanded Security Maintenance for Applications is not enabled.

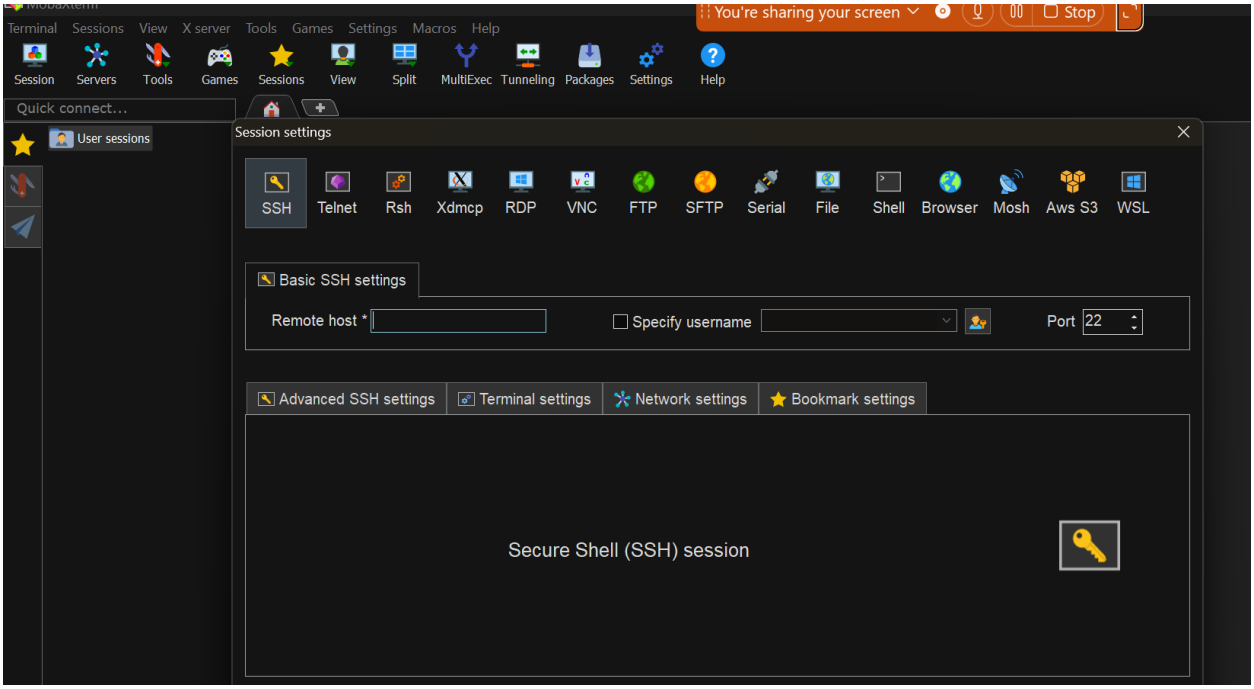

0 updates can be applied immediately.

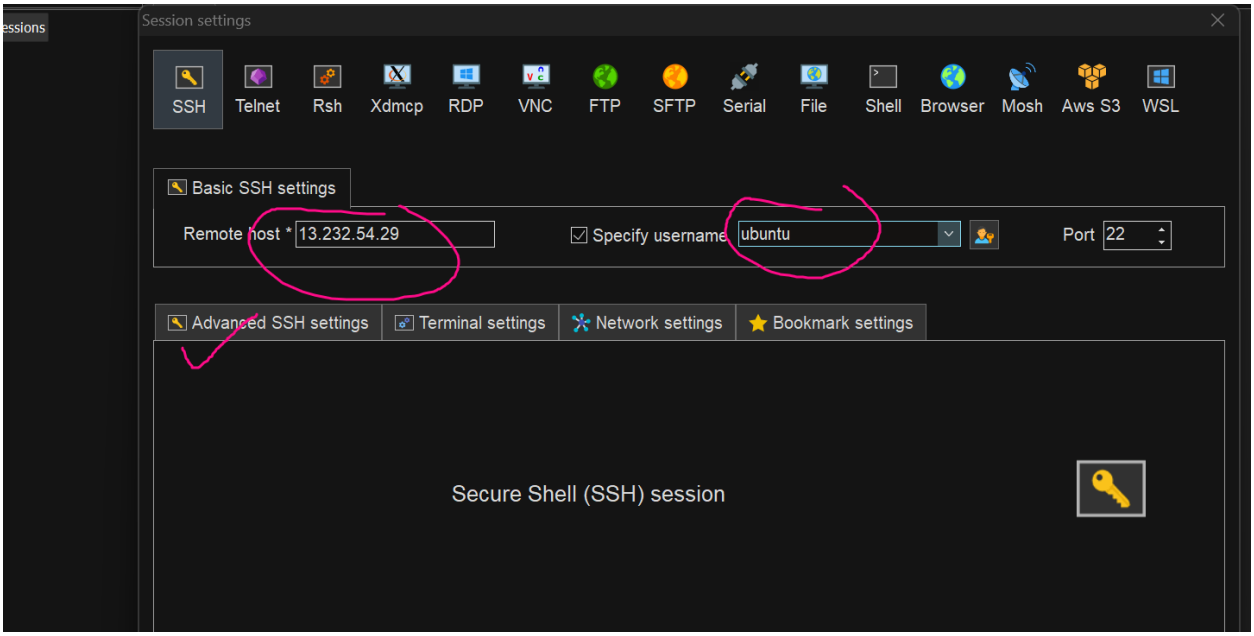

Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status
```

THIRD WAY :

USING SSH SOFTWARE -> MOBAXTERM

Open mobaxterm -> session

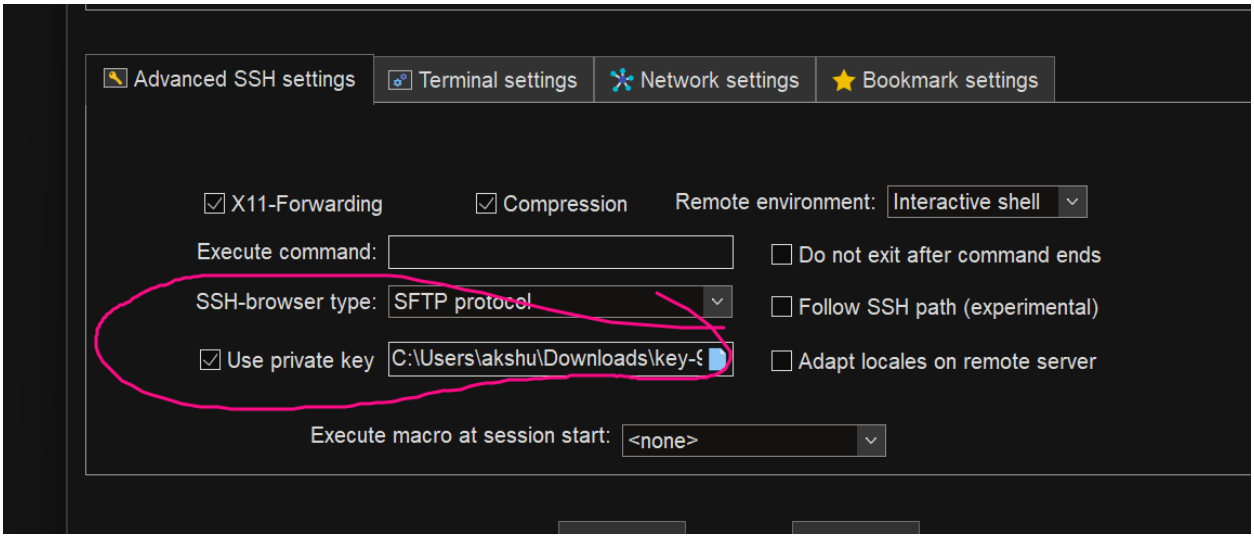

Remote host : public ip of machine

Specify username: ubuntu (if it's a ubuntu machine)

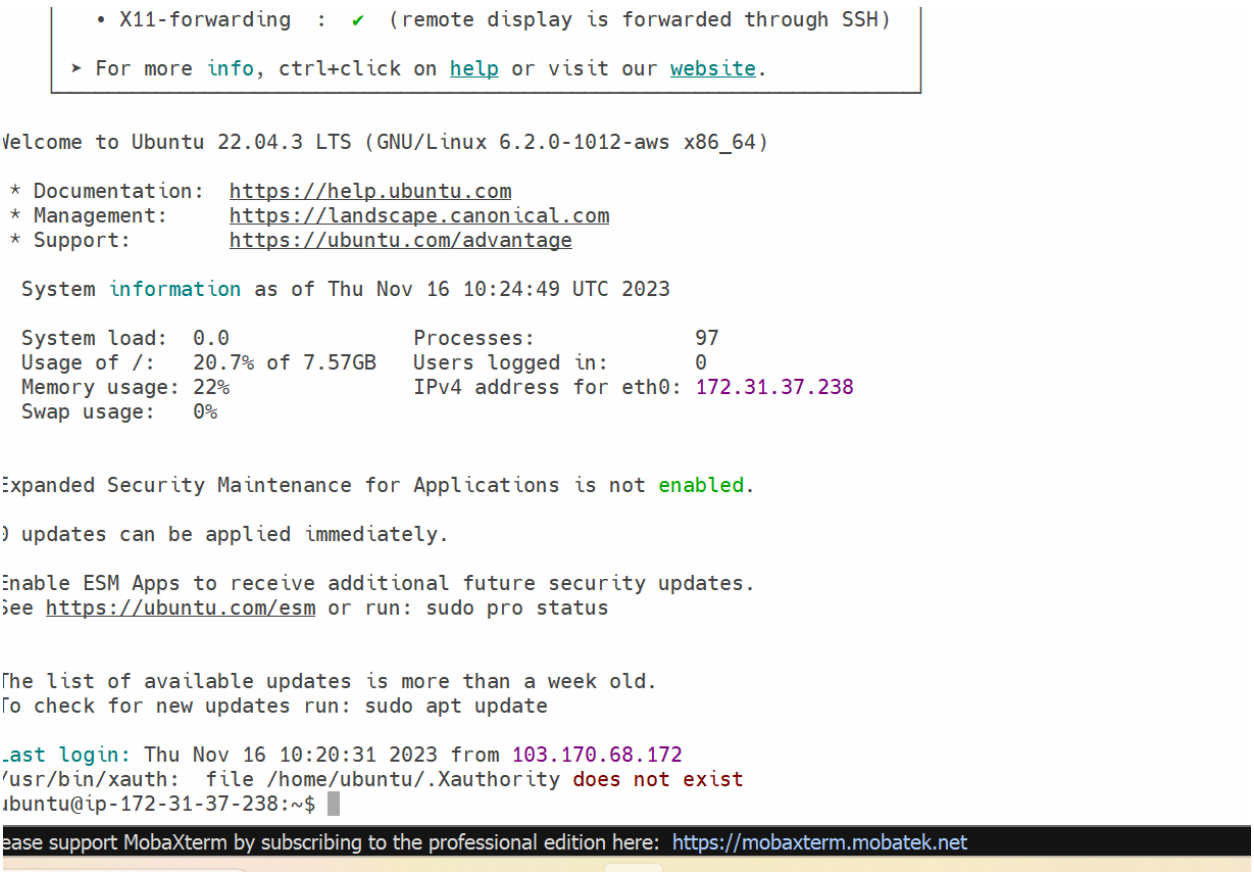

ec2-user (if its amazon linux machine)

(you cannot use any random name)

Here you need to select your keypair which you downloaded

Click on ok

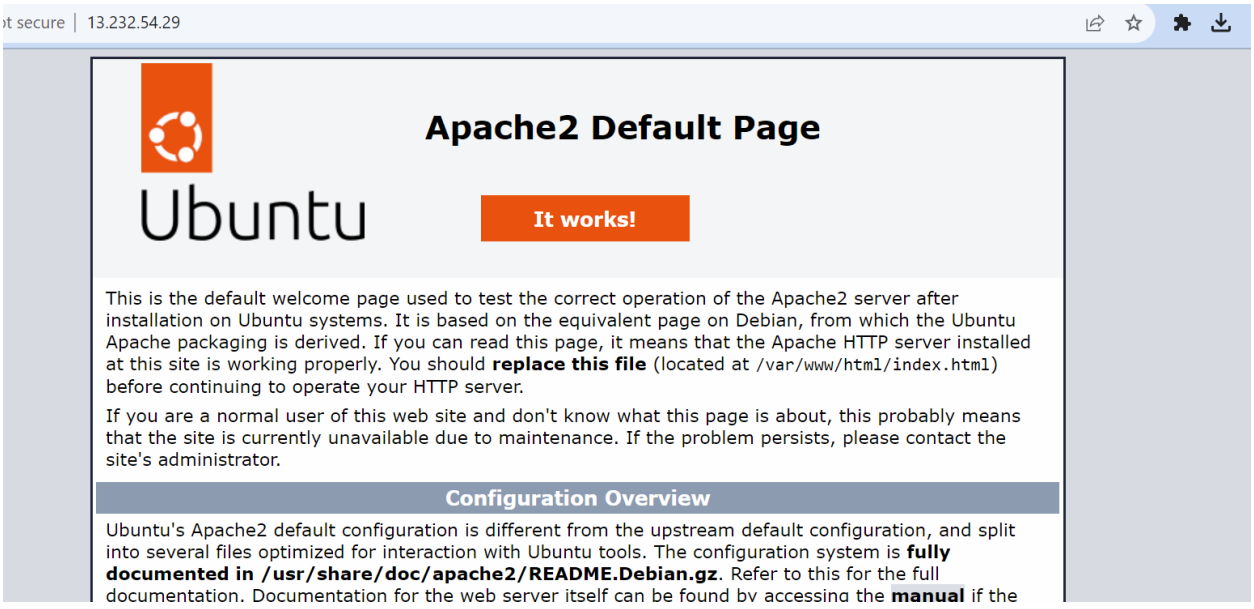

sudo su

```
ubuntu@ip-172-31-37-238:~$ sudo su
root@ip-172-31-37-238:/home/ubuntu# apt update -y
```

```
ot@ip-172-31-37-238:/home/ubuntu# apt install apache2 -y
```

```
-238:/home/ubuntu# service apache2 start
-238:/home/ubuntu#
```

Now go and check public ip

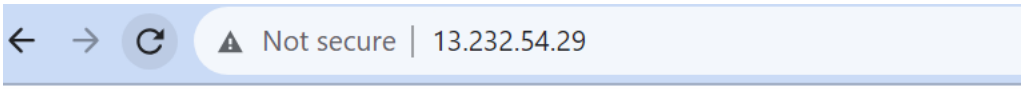

```
root@ip-172-31-37-238:/home/ubuntu# cd  /var/www/html/
root@ip-172-31-37-238:/var/www/html# ls
index.html
root@ip-172-31-37-238:/var/www/html# cat >index.html
hello world
root@ip-172-31-37-238:/var/www/html#
```

Cd: change directory

Ls: list all the files in the directory

Cat : create a new file with some content ….press ctrl d to come out of the file

ıello world
